05 · Dynamic view — Ari reserves the last seat, email unavailable
Campus Workshop Board · Ali Alyaarbi · 25011226

BEFORE: W17 — Build a tiny game · owner S10 · published · capacity 3 · S21/S22 hold seats.
Ari (S23, ari@example.invalid) is signed in, has no reservation, and clicks Reserve. Storage works; nobody else acts during this trace.
W17 and R23 are readable aliases for generated IDs; student IDs are supplied by Campus Identity.

AFTER: W17 still belongs to S10; it remains published with capacity 3. Reservations: S21, S22 and S23 (R23). Remaining seats: 0.
ARI SEES: Your place in Build a tiny game is reserved. Confirmation email is unavailable.
Refresh reads R23 from storage. A repeated reserve returns Existing(R23) unchanged, with no extra seat or email.

LEGEND: time runs downward; numbers give the interaction order. Solid arrow = request; green dashed arrow = response.
Vertical dotted line = participant lifeline. Blue = application/component; green = data store; grey = external system.
All components belong to Board API; participants reuse views 02/03. tx = one ReservationTransaction supplied by Board Repository.
The storage transaction ends at step 21. The mail attempt at step 24 is outside it. HTTPS/JSON are assumed external contracts.
